Excerpt: . verify, except those of the short resume we have given from Patten with regard to the development. It is unnecessary to refer to the many authors whose works we have had to consult, but we wish to acknowledge our special indebtedness to the researches and theories of Ray Lankester, J. TV. Spengel, Pelseneer, Remy Perrier, Bela Haller, Lacaze Duthiers, Boutan, Grobben, and Patten. The matter which we believe to be new includes the following chief points: --(1) A lateral glandular streak has been found along each side of the foot of young specimens, resembling that found in Naedla and its allies. (3) The structure of the Crop, and inferences drawn therefrom as to special torsion of the viscera of Docoglossa during consolidation of the visceral hump. (4) The respiratory function of the nuchal cavity as regards damp air. (5) Discussion of the evolution of the present topographical relations of rectum, kidneys, pericardium, and heart. (6) Details of mantle innervation and pallial tentacles. Our best thanks are due to Professor TV. A. Herdman, D.Sc., F.R.S., the Editor of this series, for his general advice and special suggestions, and to Prof. J. Travis Jenkins, D.Sc, Ph.D., late of Aberystwyth, for working out several intricate details of mantle innervation as well as other points. The greater number of the drawings are...
