Fracture of Advanced Composites with Nanofiber Reinforced Interfaces

By Wu, Xiangfa

Book Condition: New. Publisher/Verlag: VDM Verlag Dr. Müller | Fabrication, Characterization and Modeling | Advanced polymer composites have being found increasing use in a wide variety of load-carrying structural applications where their specific strength and stiffness plays a crucial role. One of the major problems with these materials is their poor resistance to delamination, particularly the free-edge and impact-induced delamination. Various designs to improve delamination resistance resulted in considerable weight and cost penalties. A novel delamination suppression concept was proposed recently based on nanofiber reinforcement of interfaces between plies in advanced laminated composites (Dzenis and Reneker, 2001). As one of the contributors to this research, the author's study focused on the comprehensive experimental and theoretical analysis of edge effects in these novel composites, analysis of rate effects on their interlaminar fracture, development of methods and experimental characterization of their dynamic/impact fracture, and development of new crack models for thin layers and composite laminates. This monograph is the summary of the author's work in this study. | Format: Paperback | Language/Sprache: english | 360 gr | 280 pp.

Reviews

It is just one of the best publication. This can be for anyone who statte that there was not a well worth reading through. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Tara Jerde**

Just no words to explain. Indeed, it is actually play, nevertheless an amazing and interesting literature. Its been written in an exceptionally simple way and is particularly simply following i finished reading through this ebook by which in fact altered me, alter the way in my opinion.
